

Bravo Probiotic

YOUR ECOSYSTEM REBUILDER

A New Cutting Edge Solution

"Bravo is a System for Making a New Ecosystem & NOT Merely a Probiotic" *Dr Jeff Bradstreet, MD, MD(H), FAAFP*

Immune Support

The 42 strains of probiotics that have gone into this super-yoghurt are also present in the gut of a newborn fed only with colostrum, the mother's first milk. When given to someone with a health issue, they can completely reboot a damaged human microbiome.

125ml per day of Bravo Probiotic over 8 weeks.

	CD4 CELLS BEFORE	CD4 CELLS AFTER	NK CELLS BEFORE	NK CELLS AFTER	
Male 55yrs	372	853	165	397	HIV
Female 35yrs	857	1279	251	340	HIV
Male 37yrs	446	478	165	195	HIV
Female 52yrs	45	61	7	10	CFS
Female 49yrs	510	820	200	410	CFS

DOI: <http://dx.doi.org/10.13128/IJAE-10160>

In the above eight week study, where the only change was to consume 125ml/day of Bravo Probiotic, participants saw a significant improvement in overall health as their immune system and bone marrow function restored.

Clinical Trials

Preparations containing milk-derived products are safe and effective measures in prevention and treatment of infections as well as autoimmune and neoplastic [cancer] diseases.

Bravo Contains

- Noble proteins like lactoferrins & immunoglobulins.
- Approx 490ng of OA-GcMAF in every litre.
- 42 microbial strains.
- Organic Swiss Colostrum.
- is rich in minerals, vitamins & bio-active molecules.

Bravo is Designed to

restore the healthy human microbiome. The following represents a sampling of human microbiome functions in regulating and maintaining health:

- Regulation of inflammation and immunity.
- Regulation of hormonal metabolism.
- Blood sugar and appetite regulation.
- Synthesis of vitamin K and biotin.
- Synthesis of many neurotransmitters.
- Liver health and detoxification pathways.
- Enhanced mineral bioavailability.
- Control of unwanted gut microbes.

How the OA-GcMAF in Bravo works

In a healthy person your own GcMAF acts as a "director" of your immune system. But viruses and cancer cells send out an enzyme called Nagalase that prevents production of your GcMAF: that neutralises your immune system. Bravo is designed to produce 490ng of GcMAF in every litre of probiotic by natural fermentation, and that rebuilds your immune system, and has 11 positive actions discovered so far, including two on cells, three excellent effects on the brain, and 6 against cancer.

Nagalase Test

High Nagalase indicates that your condition may be successfully treated with Bravo and it is useful to track your Nagalase levels to indicate your GcMAF requirement and response; and to show when your treatment is complete. Nagalase levels below 0.62 indicate your immune system is fully recovered and producing its own GcMAF.
